1

Getting Started

This manual contains installation and operation information for the Zebra ZXP Series 1 Card Printer, manufactured by Zebra Technologies Corporation.

The printer provides full color dye sublimation or monochrome thermal transfer printing on standard CR-80, ISO 7810 format, 2.12 inch by 3.38 inch (54 mm by 86 mm) PVC or PVC Composite plastic 10-mil to 40-mil cards.

Zebra ZXP Series 1 Load-N-GoTM ribbon cartridges are used with an integrated card cleaning roller for easy ribbon changing or replacement.

Several options are available, making the printers configurable for varied application environments:

- Magnetic Encoder
- USB only or USB and 10/100 Ethernet
- CardSense[™] Single-Card Feed Kit

Its auto-switching $100 \sim 240$ Volts AC, $50 \sim 60$ Hz external power supply uses interchangeable power cords for maximum flexibility.

ZXP Series 1 Part Numbers

The Part Number of a particular Zebra ZXP Series 1 Card Printer is shown on a label affixed to the bottom of the printer; that Part Number identifies the specific configuration for that printer. This chart shows the configurations that are available:

PART NUMBER	DESCRIPTION
Z 1 0 0	BASE UNIT
1	Single-Sided
	SMART CARD OPTIONS
0	None
	MAG ENCODER OPTIONS
0	None

Features, Controls, and Indicators

Card Feeder Cover Lid Release Button Multi-Function LCD Display Panel Multi-Function Control Button Card Output Hopper

The picture below points out some of the printer's external features; see Section 3 for an interior view.

- **Card Feeder Cover** Opening the Card Feeder Cover gives access to the automatic card feeder. The translucent cover allows you to see when the card supply is running low. The feeder has a 100-card capacity (30-mil cards).
- Lid Release Button Pressing the Lid Release Button allows the printer's lid to swing open. This gives internal access for changing the Ribbon Cartridge, changing Cleaning Rollers, and cleaning the printer.
- **Multi-Function LCD Display Panel** The Multi-Function LCD Display Panel displays printer status information. Messages also alert the user of the need for action and indicate certain fault conditions.
- **Multi-Function Control Button** The Multi-Function Control Button initiates several functions; these are described in the appropriate sections of this document.
- Card Output Hopper Front-side Card Output Hopper has a 50-card capacity.
- Quick Help QR Code The QR code launches web-based help pages to find user videos for simple set-up and maintenance instructions; see http://www.zebra.com/zxp1-info for details.
- **Zebra Print Touch Tag** This touch point uses NFC technology to provide key information about the printer; see <u>http://zebra.com/nfc</u> for details.

Rear Panel Connectors

Standard USB Connection

The figure below shows the rear of the Printer with the standard USB connection.

Ethernet Connection

The figure below shows the rear of the printer with the standard USB interface with the Ethernet connection.

The Ethernet Connector has two LED status indicators:

- Power LED (amber): When illuminated, indicates power is on.
- Link LED (green): When illuminated, indicates valid Printer-Ethernet connectivity.

Multi-Function LCD Panel

Your printer is equipped with a Multi-Function LCD Panel to provide printer status information. The readout is controlled by the Multi-Function Control Button directly below the viewing window.

Multi-Function LCD Panel messages fall into three categories: Operational, Warning, and Error.

Operational Messages

Operational Messages are displayed during the Printer's normal operation.

OPERATIONAL
CARD READY
CLEANING PRINTER
CLOSE FEEDER DOOR
DOWNLOADING DATA
DOWNLOADING FIRMWARE
EMPTY FEEDER THEN CLOSE COVER
FEED LONG CLEANING CARD IN EXIT
INITIALIZING
INSERT CARD
INSERT FEEDER CLEANING CARD
MAG ENCODING
PRINTING BLACK
PRINTING CYAN
PRINTING MAGENTA
PRINTING MONO
PRINTING OVERLAY
PRINTING YELLOW
PUSH BUTTON TO CONTINUE
READY
REMOVE FEEDER CLEANING CARD
REMOVE LONG CLEANING CARD
REMOVE RIBBON THEN CLOSE LID
SINGLE CARD READY-PRINT OR EJECT

Warning Messages

Warning messages alert the operator to action that should be taken; the printer will generally continue operation.

WARNINGS (Printer will still operate)
CHECKING RIBBON
CLEAN PRINTER
CLOSE LID
ENCODING ERROR
INVALID MAGNETIC DATA

Error Messages

Error messages are displayed when a situation causes the printer to stop operating. Depending on the cause of the error message, restarting the printer or curing the displayed Error may return the printer to operational status, or the printer may require troubleshooting and repair.

ERRORS (Printer will not operate)
CHECK RIBBON
COMMAND ERROR
COVER OPEN
LID OPEN
MECHANICAL ERROR
OUT OF CARDS
OUT OF RIBBON

lcons

Throughout this manual, different icons highlight important information, as follows:

Note • Indicates information that emphasizes or supplements important points of the main text.

Important • Advises you of information that is essential to complete a task, or points out the importance of specific information in the text.

Provides an example or scenario to demonstrate or clarify a section of text.

Electrostatic Discharge Caution • Warns you of the potential for electrostatic discharge.

הוראת זהירות לפריקה אלקטרוסטטית • מזהירה אותך מפני סכנה לפריקה אלקטרוסטטית.

Electric Shock Caution • Warns you of a potential electric shock situation.

הוראת זהירות להתחשמלות • מזהירה אותך מפני מצב של סכנה להתחשמלות.

Hot Surface • Warns you of a situation where excessive heat could cause a burn.

משטח חם • מזהירה אותך מפני חום חריג העלול לגרום לכווייה.

Caution • Advises you that failure to take or avoid a specific action could result in physical harm to you, or could result in physical damage to the hardware.

זהירות • מזהירה אותך כי אי-נקיטה בפעולה או אי-הימנעות מפעולה מסוימת עלולות לגרום לפגיעה פיזית בך, או עלולות לגרום לנזק פיזי בחומרה.

Zebra Supplies

Genuine Zebra supplies meet stringent quality standards and are recommended for optimal printing quality and proper printer performance; see <u>http://www.zebra.com/supplies</u> for details.

ZXP Series 1 printers are designed to work only with Zebra ZXP Series 1 True Colours[®] ix Series Ribbons.

2

Printer Installation

Unpacking Your Card Printer

Your ZXP Series 1 Card Printer ships in a cardboard carton, protected by foam inserts and a protective anti-static bag. Keep all packaging material in case you need to move or re-ship the printer.

- **Step 1.** Before opening and unpacking the printer, inspect the carton to ensure that no damage occurred during shipment.
- **Step 2.** Ensure that you have a clean and nearly dust free environment for proper operation and storage of the printer.
- Step 3. Open the carton, and remove the box containing the printer accessories.
- Step 4. Lift the printer out of the carton.
- Step 5. Remove the protective foam inserts.
- Step 6. Make sure the following accessories are included with your printer:
 - a. Software CD-ROM
 - b. Quick Start Guide
 - c. Power Cords (one or two depending on the configuration)
 - d. Power Supply
 - e. USB Printer Cable

If any items are missing, please contact your Zebra Reseller. To reorder; refer to Appendix E of this manual.

Installing the Printer

Setting up the Printer

- **Step 1.** Place the printer in a location that allows easy access to all sides. The printer should never be operated while resting on its side or upside down.
- Step 2. Remove the yellow CAUTION label from the back of the printer.

Step 3. Ensure that the printer's power switch is in the OFF (O) position.

Connecting Power

Caution • Limit electrical power supplied to the printer to 24 VDC. Limit excess current draw to 16 amps or less, using an associated circuit breaker or other such device. Never operate the printer in a location where operator, computer, or printer can get wet. Personal injury could result. The printer must be connected to an earthed electrical power supply and properly protected against electrical surges and grounding faults. The power supply pack can only be replaced by the same product from the manufacturer.

זהירות יהגבל את מתח החשמל המסופק למדפסת ל-24 VDC. הגבל את צריכת הזרם ל-16 אמפר ומטה, באמצעות מפסק מעגל או התקן דומה אחר. אסור להפעיל את המדפסת במקום בו המפעיל, המחשב או המדפסת עלולים להירטב. התוצאה עלולה להיות פציעה. חובה לחבר את המדפסת אל מקור הזנת מתח מוארק, ולהגן עליה בצורה נאותה מפני חובה לחבר את הארקה. ניתן להחליף את מארז ספק המתח רק במוצר זהה המסופק על-ידי היצרן.

Caution • Do not power the printer with USB attached to your computer at this time. THE DRIVER WILL PROMPT YOU WHEN IT IS TIME TO PLUG IN AND POWER UP YOUR PRINTER.

זהירות • אל תפעיל את המתח במדפסת כאשר חיבור USB מחובר באותו זמן למחשב שלך. מנהל ההתקנים יודיע לך מתי הגיע הזמן לחבר ולהפעיל את המדפסת.

Step 1. Insert the power supply plug into the power socket, attach the power cord (120VAC or 230VAC) to the power supply, then plug the power cord in to a grounded electrical socket of the proper voltage and type.

Step 2. Ensure that the printer's power switch is in the OFF (O) position.

Connecting the Printer to your Computer

Step 1. If your printer has only the USB interface, attach the included USB cable to your computer and the printer.

Step 2. If your printer has the optional Ethernet interface (as well as the USB interface), connect **either** the USB cable to printer and computer or the Ethernet cable to the printer and the Ethernet network.

Important • Do not connect both the USB and the Ethernet interfaces at the same time!

Viewing Printer Information

- **Step 1.** Turn printer power ON, wait until the LCD Display Panel shows READY, turn printer power OFF, and then wait a minimum of 20 seconds.
- **Step 2.** While holding down the Control Button, turn printer power ON. The LCD Display Panel will glow blue.

- **Step 3.** Keep pressing the Control Button, and observe the LCD Display Panel show Initializing and CHECKING RIBBON.
- **Step 4.** When the PRINTER INFO message appears in the display panel, momentarily release and press the Control Button to display the first parameter: Model Name.
- **Step 5.** Continue to tap the Control Button to advance through the parameters and cycle back to the beginning:
 - a. Model Name (including the printer configuration)
 - b. Serial Number
 - c. Firmware Version
 - d. Head Resistance
 - e. X & Y Offset (front)
 - f. X & Y Offset (back)
 - g. EC Offset (front and back)
 - h. Ribbon Type
 - i. Smart Offset
 - j. **IP Address** (note this address for Ethernet installation; see page 20)
 - k. Mask
 - 1. Gateway
 - m. DHCP (enabled or disabled)
- **Step 6.** A long press of the Control Button (about 1 second) will escape the sequence. Idle time of 15 seconds will also escape the sequence.

Installing the Windows Printer Driver

Installing the USB Printer Driver

- **Note** To install the Ethernet driver, see page 20.
- Step 1. If not already done, connect power to the printer. Turn power OFF.
- Step 2. Connect the USB port on the rear of the printer to the computer's USB port.
- Step 3. Ensure that the Printer's power switch is in the OFF (O) position.
- **Step 4.** Insert the **User Documentation and Drivers CD** into the CD drive of the host computer. The **Main Menu** will open.
- Step 5. From the Main Menu, click Install Zebra Printer Driver.
- **Step 6.** The **InstallShield Wizard** window will open. To proceed with the installation, click the **Next** button.

Step 7. Select Install USB printer drivers, and click the Next button.

Step 8. Ensure that the Printer's power switch in the OFF (O) position; and then click the **OK** button.

i	Please make sure your printer is turned off. After installation of the driver, you would be prompted to turn on your printers.
---	--

Step 9. This will bring up the License Agreement window. To proceed with the installation, click the Yes button.

Step 10. This will bring up the **Setup Type** window. Select *Complete* to install all program features, and click the **Next** button.

Zebra ZXP S3 and S1 Card Printers Setup Type Select the setup type to install.		X
	Please select a setup type. • Complete • All program features will be installed. (Requires the most disk space.)

Step 13. The Congratulations window will appear.

Zebra ZXP S3 and S1 Card Printer	z z
Congratulations on installing	the printer drivers.
	Please read the instructions below as they apply to your printer settings. USB Printers. Turn on the USB printer. Follow the instructions of the Microsoft hardware withard. If the drivers did not automaticably initial, make sure you specify the following location for the usb drivers. C. Vhogson Res (X8B)/Zeba 1 echinologies Corporation/Zebra 2/4P 53 and 51 Card Printers Microsoft Signature In case the Microsoft Digital Signature page is displayed, please answer YES to Do you want to mstall this driver. Answering ND will not install the drivers. The drivers are compatible with Microsoft Windows.
InstallSifed	< Back [Next >] Cancel

Step 14. At this point, **turn on your printer**; and then click the **Next** button. The *Windows New Hardware Found* wizard will find the printer.

Step 15. When the InstallShield Wizard Complete window appears, click the Finish button.

Step 16. This completes USB driver installation.

Note • You may need to change the card setup (card orientation, ribbon type, etc.), encoding, overlay, and/or black panel settings via the Printer Driver; see Printing Preferences on page 53.

Note • You may also need to set the card thickness adjustment to the thickness of the cards being used; see Loading Cards on page 35.

Installing the Ethernet Printer Driver

Note • To install the USB driver, see page 15.

Important • The Ethernet Network must be configured correctly, with the Printer and the host computer on the same subnet mask. If you are not sure how to verify this or change the configuration, consult someone knowledgeable on Ethernet Networks.

- Step 1. If not already done, connect power to the printer. Turn power ON.
- **Step 2.** Connect the Ethernet port on the rear of the printer to the Ethernet network connection or directly to the computer's Ethernet port.
- **Step 3.** Ensure that the Printer's power switch in the ON (|) position.
- **Step 4.** Insert the **User Documentation and Drivers CD** into the CD drive of the host computer. The **Main Menu** will open.
- Step 5. From the Main Menu, click Install Printer Driver.
- **Step 6.** The **InstallShield Wizard** window will open. To proceed with the installation, click the **Next** button.

Step 7. Select Install Ethernet printer drivers, and click the Next button.

Step 8. This will bring up the **License Agreement** window. To proceed with the installation, select the *I accept the terms of the license agreement* option, and then click the **Next** button.

You have successfully installed the network printer.

Printer Pooling

Setting Up Printer Pooling

Printer Pooling is a standard feature of Windows, which lets you spread the printed output across a pool of several printers. In this example, we will install and setup the three network printers to be used for pooling.

- Step 1. Before proceeding to pool the printers, test them individually, and be sure they are configured similarly. Specifically, check the following:
 - Ribbon panel configuration (ribbon type, and what prints on which side of the card).
 - Mag encoding configuration.
 - Black extraction configuration (if applicable).
- Step 2. Access the Ports Tab.

To access the Ports tab, select *Start > Devices and Printers*. Right click on the *Zebra ZXP Series 1 USB Card Printer* listing. Select *Printer properties > Ports*.

General	Sharing	Ports	Advanced	Color Management	Security	Device Se	etting

		C	10.000				

- Step 3. Select the three network printers by selecting the associated checkbox (circle above).
- Step 4. Select the *Enable printer pooling* checkbox (arrow above).
- Step 5. Click the **Apply** button, then click the **OK** button.

Using Printer Pooling

Important • Send print jobs to the printer pool, not to an individual printer.

When the first printer has taken as many jobs as it can handle (that being two jobs - one to be printed immediately, the other waiting), the following jobs "spill over" to the second printer, and then to the third printer.

Note that if you are only printing two jobs, they would both go to the first printer. Pooling is a spill-over methodology. It does not balance printer usage.

Once the pool has been set up, maintenance and configuration changes should be done through the menus for each individual printer, **not** through the pool (which can produce undesirable results).

Important • The effect of any maintenance and/or changes can (and should) be tested by sending print jobs **separately** to each printer, not to the pool.

Printer Setup

Printer Features

The following shows an interior view of the ZXP Series 1 Card Printer.

Loading Ribbon Cartridge

The ZXP Series 1 Printer requires genuine Zebra ZXP Series 1 True Colours[®] ix Series Ribbons. These high-performance Resin Thermal Transfer and Dye Sublimation ribbons are specifically designed for the ZXP Series 1 Printer.

- Each ribbon cartridge includes an integrated adhesive cleaning roller assembly that is used to clean the cards entering the printer. Improper cleaning will reduce printer life and degrade print quality
- When the ribbon is completely used, change the cartridge assembly.

Caution • DO NOT TOUCH the printhead or the electronic components on the printhead. Discharge of electrostatic charge from the human body or other surfaces can damage the printhead or other electronic components.

הוראת זהירות לפריקה אלקטרוסטטית • אסור לגעת בראש ההדפסה או ברכיבים האלקטרוניים שעל ראש ההדפסה. פריקה של מטען אלקטרוסטטי מגוף האדם או ממשטחים אחרים עלולה להזיק לראש ההדפסה או לרכיבים אלקטרוניים אחרים.
- 1. Open printer lid by pressing the Cover Release button on the top of your printer.
- **2.** Peel protective wrapper from the adhesive cleaning roller by gently pulling on the tape. Discard the protective wrapper.

3. Insert the ribbon cartridge with the cleaning roller facing down, so the gears on the ends of the rollers fit into the appropriate slots.

4. Close the printer lid and push down until you hear an audible click.

Note • After the lid is closed, the ribbon automatically synchronizes when the printer power is on.

Loading Cards

Card Feeder

The card feeder is used for loading cards, it can hold up to 100 cards of 30-mil thickness. The card feeder is located under the card feeder cover of the printer. Check with your card vendor or packaging label to identify the thickness of your cards. A typical card thickness is 30 mil.

1. Set the card thickness adjustment (circled below) to the number corresponding to the thickness of the cards being loaded. Note that the thickness adjustment ranges from 10 mils to 40 mils.

Failure to make the proper thickness adjustment (particularly for 10-mil cards) may result in a multiple-card jam. To clear a card jam, refer to MECHANICAL ERROR on page 77.

2. Open the card feeder cover.

3. Slide the card guide all the way to the right until it locks in place with an audible click.

Caution • Hold the cards by the edges only. **DO NOT** touch print surfaces as this can reduce print quality.

זהירות •אחוז בכרטיסים באמצעות שפות הכרטיס בלבד. אסור לגעת במשטחים המודפסים מכיוון שנגיעה עלולה להפחית את איכות ההדפסה.

- **4.** Remove the wrapper from the card stack.
- **5.** Examine the cards, and discard any cards with damaged edges.
- **6.** Holding the card stack by its sides, fan the cards (like flexing a deck of playing cards) at least once from each end, so as to separate all the cards.
- 7. Restore the card stack to its original squared-off condition.
- **8.** Place the stack of cards into the card feeder.

9. Close the card feeder cover. When card feeder cover is closed, the card guide locking mechanism will be released automatically.

Card Output Hopper

- **1.** Raise the printer lid.
- 2. Pull the card output hopper down to place it in its functional position.

3. When not using the printer, place the card output hopper back in its closed position to protect the printer from dust.

Printing a Test Card

With ribbon cartridge and cards loaded, your printer is ready to print. To check the operation of the printer, you should print a test card.

- 1. Select *Start* > *Devices and Printers*. Right click on the *Zebra ZXP Series 1 Card Printer* listing. Select *Printer properties* > *Device Settings;* and click on the **Tools** button.
- **2.** Observe the **Tools** window.

Command to send to pr	inter

- 3. From the Print Test Card dropdown menu, select the desired test card (circled above).
- **4.** Click on the **Print** button (arrow above) to print the selected test card; see sample test cards below.

Printer Parameters:

Encoder Parameters:

Typical Printer Operation

The ZXP Series 1 Card Printer can be used with your software application program, using the Drivers on the CD provided with your Printer; refer to Installing the Windows Printer Driver on page 15.

Creating a Sample Card

Before you begin a new printing session, print a sample card to ensure that the cards will be printed correctly. Follow the steps below to print your first card.

- 1. Open a new Microsoft Word document.
- **2.** If the Zebra Printer was not set as the default printer, select the ZXP Series 1 Card Printer as the default.
- 3. From the Microsoft Word document., set the Page Layout:
 - a. Size: CR-80, ISO 7810 format, 2.12 inch by 3.38 inch (54 mm by 86 mm) Card
 - **b.** Orientation: Portrait or Landscape
 - **c.** Margins: Top, Bottom, Left, and Right = 0 (zero).
- 4. The card appears as a Microsoft Word document.
- **5.** Design a card with both black and colored text and with colored images similar to the sample card shown below.

Printing the Sample Card

Once you complete creating your sample card, you are ready to print. Ensure your printer has a True ColoursTM Card Printer Ribbon Cartridge installed and there is card stock in the card feeder. See Section 3 for instructions on installing the ribbon and loading the cards.

- 1. Print your sample card to the ZXP Series 1 Card Printer.
- **2.** Once the printing is completed, remove the sample card from the card output hopper; and check for any discrepancies. For quality issues, see Troubleshooting on page 75.
- 3. If the sample card is correct, your printer is ready to produce more cards.

Printer Settings and Adjustments

Introduction

This section describes the settings and adjustments that can be made to your ZXP Series 1 Printer Driver:

Printer Properties	2
Printing Preferences	53

Printer Properties

Note • The screen shots shown in this section are for a printer using the USB interface. If you are using the Ethernet interface, the screens will refer to the "Network Printer." Screen shots may also look different depending on your Operating System.

Access to Card Printer Properties varies depending on your Operating System (OS); e.g., for Windows 7, select *Start* > *Devices and Printers*. Right click on the *Zebra ZXP Card Printer* listing, then select *Printer properties*.

General Tab
haring Tab
Ports Tab
Advanced Tab
Color Management Tab
ecurity Tab
Device Settings Tab

The **OK** button saves the settings and closes the printer properties pages.

The Cancel button exits Printer Properties. Changes made are abandoned.

The Apply button saves the settings but does not close the printer properties pages.

The **Help** button enables you to view a corresponding page of help information.

General Tab

Shanng	Ports Advanced C	olor Management	Security	Device Setting
-	Zebra ZXP Series 1 US	B Card Printer		1
Location:				
<u>C</u> omment:				
Model:	Zebra ZXP Series 1 USE	Card Printer

Double-side	d: No	86mmx54mm	n Card	*
Staple: No				
suprentio				
Speed: 1 pp				
Speed: 1 pp Maximum re	esolution: 300 dpi			

The General tab shows the selected printer and lists the features of the printer.

- Location Lets you specify where the printer is located.
- **Comment** Lets you specify general information about the printer, such as the type of print device and who is responsible for it. Once set, these fields can be displayed by applications.
- Model Specifies the name of the printer driver installed.
 - Features Specifies whether various options are available on the printer.

The **Printing Preferences** button **t**akes you to Printing Preferences used to set selected configuration parameters; see Printing Preferences on page 53.

The Print Test Page button sends the standard Windows test page to the printer.

Sharing Tab

On the Sharing tab, you can choose to share the printer over the network and install additional drivers to accommodate different operating systems. See Appendix A for the various printer sharing options allowed and the configurations required.

ieneral Sharing	Ports	Advanced	Color Management	Security	Device Setting
You ca printer off.	n shar will no	e this printe ot be availab	with other users o le when the compu	n your net uter is slee	work. The ping or turned

			Ad	ditional Dr	ivers

Printer sharing tasks that you can perform include:

- To share a printer, select the *Share this printer* checkbox; and specify a name for the shared resource. Click the OK button when you are finished.
- To change the shared name, simply enter a new name in the *Share name* field; and click the OK button.
- To quit sharing a printer, deselect the *Share this printer* radio button. Click the OK button when you are finished.

Drivers: If this printer is shared with users running different versions of Windows, you may want to install additional drivers, so that the users do not have to find the print driver when they connect to the shared printer.

For *Printer Sharing Configurations* and *Advanced Sharing Settings*, refer to Appendix A for details.

Ports Tab

Use the Ports tab to specify the computer port to which the printer is connected. This will have been established at the initial installation of the printer.

Print to the for checked port	ollowing port(s)	. Docume	nts will print to	the first fre	e
Port	Description		Printer		*
COM1:	Serial Port				
COM2:	Serial Port				
COM3:	Serial Port				E
COM4:	Serial Port				
FILE:	Print to File				
ZPF001:	Zebra Studio	Print Ma			
USB002	Virtual printer	port for	Zebra ZXP Se	eries 1 USB	Card Pr 👻
Add P	or <u>t</u>	Delet	e Port	Confid	jure Port
Add P	or <u>t</u>	Delet	e Port	Config	jure Port

An exception to this is if you wish to use *printer pooling*, the ability to distribute print jobs to multiple printers; see Printer Pooling on page 29 for details.

To enable printer pooling, select the *Enable printer pooling* checkbox, then check the additional ports boxes. Each port should have a single Zebra printer installed on it. All the pooled printers must be identical models with the same configuration (e.g., all with YMCK front); and each must have its own printer driver installed.

Now, when you print to the "main printer" (that is, whichever printer you right-clicked in Devices and Printers to get to this screen), this printer will get print jobs until it has buffered as many jobs as it can take. The remaining jobs will then "spill over" to other printers until all printers in the pool are busy.

Advanced Tab

er
* v
er
er

The Advanced tab determines the spooling (queuing) of print jobs and determines how spooled jobs are handled relative to the most recent job.

You can make the printer always available by selecting the *Always available* radio button, or you can limit availability by selecting the *Available from* radio button and specifying the "Available from" and "To" times. Click the **Apply** button, and then the **OK** button.

- **To enable spooling:** Select the radio button labeled *Spool print documents so program finishes printing faster.*
 - Select *Start printing after last page is spooled* if you want the entire document to be spooled before printing begins. This option ensures that the entire document is sent to the print queue before printing. If for some reason printing is canceled or not completed, the job will not be printed.
 - Select *Start printing immediately* if you want printing to begin immediately when the print device is not already in use. This option is preferable when you want print jobs to be completed faster or when you want to ensure that the application returns control to users as soon as possible.
- To disable spooling: Select the radio button labeled *Print directly to the printer*.

Printing Defaults: When the printer is set up as a network printer on a server, Printing Defaults needs to be used to set the printer options. The values from this screen will be filled into the Windows Drivers when they are installed on local PCs with the Add Printer Wizard.

Color Management Tab

This is the standard Windows color management screen, showing user access to various printer control options.

The Device Settings tab provides device information, security status, and printer usage.

Device Information

- Model: Specifies the printer model number.
- **Fw version:** Specifies the printer model and the installed firmware version.
- Serial number: Specifies the printer serial number.
- **Ribbon type:** Specifies the ribbon installed in the printer.
- Head resistance: Specifies the printhead resistance value.
- Mag encoder: Specifies if this option is present.
- Panels printed: Shows the total number of panels printed for the lifetime of the printer.
- **Remaining count:** Shows the remaining card count for the ribbon installed. For monochrome ribbons, this will display *Unknown*.

Click on the **Save/Restore** button to save your printer and/or driver settings. You can later restore those saved settings; see Page 50 for details.

Click on the **Tools** button to access a dialog box that allows you to test and communicate with the printer; see Page 51 for details.

<printerinfo><serial_no< td=""><td></td></serial_no<></printerinfo>	

Dialog box for saving printer and driver settings or restoring previously saved settings.

To save settings:

- Step 1. Click on the appropriate Save button (Printer Settings or Driver Settings).
- Step 2. Observe a browse window showing the default location where the configuration files are saved. The location depends on the Operating System; e.g., for Windows 7, C:\Program Data\ZXPS1\config.
- **Step 3.** Enter an appropriate file name, and click the **Save** button. Note: A prefix, P_ or D_, will be added to the file name for printer settings and driver settings respectively.
- Step 4. Your selected settings (Printer Settings or Driver Settings) will be saved.

To restore settings:

- Step 1. Click on the appropriate Restore button (Printer Settings or Driver Settings).
- Step 2. Observe a browse window showing the default location where the configuration files are saved. The location depends on the Operating System; e.g., for Windows 7, C:\Program Data\ZXPS1\config.
- **Step 3.** Select the desired file, and click the **Open** button. Note that prefixes P_ and D_ indicate printer settings and driver settings respectively.
- Step 4. Your selected settings will be restored.

Dialog box for testing and communicating with the printer.

- **Command to send to printer** Enter a printer command (all capitals without the leading escape character) in the top edit box; e.g., MI MO, which will pick and eject one card. Then click on the **Execute** button. *Printer Status* will show the status of the command. Contact Zebra Technical Support for a complete list of the printer commands.
- **Print test card** Select the desired test card type from the dropdown menu: Standard, Printer Parameters, and Encoder Parameters. Click on the **Print** button to print the card.
- **Cleaning** Select the desired cleaning to be performed from the dropdown menu: Printer only or Magnetic encoder. Click on the **Clean** button to run the cleaning process.
- Offset setting Enter the Front X and Y direction offsets, and click on the Set Offsets button to set the offsets for printing the card.
- Firmware download: See Page 52 for details.
- Send file This command will allow a .prn or .txt file to print.
 - The .prn file must be created with a Zebra printer driver using the same ribbon as present in the printer.
 - The .txt file must contain firmware commands only with only one command per line. The first line must only contain *MASTER*; the last line must only contain *SLAVE*.

Firmware Download

This option is used to install the ZXP Series 1 firmware, downloaded from the Zebra web site at <u>http://www.zebra.com</u> under *Drivers & Downloads*.

\sim		
	- Ö	
L		

Important • Do not turn off the power to the printer until the process is done and the LCD Display shows *READY*. If the download process is interrupted, the printer will not operate.

- **Step 1.** Download the firmware from Zebra web site (<u>http://www.zebra.com</u>), and save it to a location you can easily find.
- Step 2. In the Tools window, click on the Select File button.

- **Step 3.** From the Browse window, "find" and select the firmware file (BIN file type) you downloaded in Step 1; and click on the **Open** button.
- Step 4. Click on the Start Firmware Download button to install the firmware.
- **Step 5.** Wait while the firmware downloads and installs, and then wait while the printer resets and initializes.
- **Step 6.** When the installation is complete, the Status field will display *Firmware Downloaded Successfully.*

Printing Preferences

Note • The screen shots shown in this section are for a printer using the Ethernet interface. The screens refer to the "Network Card Printer." If you are using the USB interface, the screens will refer to the "USB Card Printer." If you are using a network driver on a server, set the parameters from the Advanced Tab, Printing Defaults.

Access to Card Printing Preferences varies depending on your Operating System (OS); e.g., for Windows 7, select *Start* > *Devices and Printers*. Right click on the *Zebra ZXP Card Printer* listing, then select *Printing preferences*.

Card Setup tab allows the user to adjust selected card and print job parameters.

- Printing options
 - Orientation: Selection for portrait or landscape printing.

- Rotate 180^o: Selection for rotating the image 180^o. The options are No and Yes.

4: Printer Settings and Adjustments Printing Preferences

- **Monochrome Conversion:** Specifies the method of monochrome conversion used in printing. Different selections have different effects on the way the image is printed. The options are Diffusion, Halftone, Barcode, Text Mode, and Auto.
 - **Diffusion**: Error diffusion is used primarily where you have a full color (RGB image with 8 bits per pixel) or full gray (single color but still 8 bits per pixel) that you need to print with binary printing (can only print full-on or full-off; i.e., 1 bit per pixel). Typically preferred over halftoning (see below) for most images.
 - Halftone: To simulate gray in graphics, halftones are printed. Halftones are arrays of dots arranged in a grid (e.g., 6x6 or 8x8) to represent each image pixel as a shade of gray. For dark gray, more grid dots are black. For light gray, more grid dots are white As the grid size goes up so does the number of possible output levels, 6x6 cell has 36 possible output levels while 8x8 has 64. But as cell size increases, there is a corresponding decrease in resolution.
 - **Barcode**: This is the simplest method for converting from 8 bits per pixel to 1 bit per pixel.

For example, the input pixel can be a value from 0 to 255. If the threshold is 128, any pixel over 128 becomes full on (1); and any pixel that is less than 128 becomes full off (0). This mode works best for text, barcodes, line art, logos -- everything except continuous-tone pictures.

- **Text Mode**: This mode can be used when you have black anti-aliased text. Black anti-aliased text is typically black in the center; but on the edges, it has shades of gray that get lighter as you move out form the center of the text. This anti-aliased text will have a softer looking edge that is less sharp than non antialiased text.
- Auto (default): This mode analyzes the image and optimizes the conversion (diffusion, halftone, barcode, or text mode) automatically.

- Monochrome Conversion SUMMARY
 - **Diffusion/Halftoning:** Use on pictures. Image content dictates if error diffusion or halftoning would look best. For the majority of time, diffusion is better.
 - Barcode: Use on text, barcodes, line art, and simple graphics.
 - Text Mode: Use with black anti-alised text.
- **Printing Mode** Sets the type of printing required:
 - Print.
 - **Encode Only** is used when magnetic encoding is the only function desired, printing will not occur.
 - Print and Encode on same side prints on the magnetic stripe side of the card.
- Copies Sets the number of copies of cards printed.
- **Auto detect start of image for half panel ribbons** Enabled only when a half-panel ribbon is installed. Automatically detects the edge of the color image to be printed; see Appendix D for setting the edge manually.
- Single Feed options (refer to Appendix C for details on the single-card feed mode)
 - **Card feeder**: The printer will attempt to a pull a card from the Card Feeder. If the Card Feeder is empty, the printer will generate an *OUT OF CARDS* error message.
 - **Single feeder slot**: For each print job, the printer will generate an *INSERT CARD* message. Any cards in the Card Feeder will not be used.
 - **Auto feed:** The printer will attempt to feed cards from Card Feeder first. If Card Feeder is empty, the printer will generate an *INSERT CARD* message. No *OUT OF CARDS* error message will be generated.
- Ribbon info and options
 - Ribbon type displays the type of ribbon installed in the printer. Tagged ribbons (YMCKO) are detected and displayed automatically. Untagged ribbons (Black Monochrome and White Monochrome) must be selected from the dropdown menu. Note that the type of monochrome ribbon selected is critical -- white monochrome ribbon will not print acceptably with Black Monochrome selected.

Ribbon Description	Eco Cartridge Image Count
ҮМСКО	100
1/2 YMCKO	400
Black Monochrome	1000
White Monochrome	500

Depending on the printer model and ribbon combination selected, the **Black Panel Options** and **Overlay Varnish Options** buttons are enabled for color ribbons and disabled for monochrome ribbons; see Page 57 and Page 63 respectively.

Black (K) Panel Options

Disable black extraction 1	ype	Apply black extraction on

	вч	U U
Area manager		
Orientation Landscape	•	*
Units inches	-	
X dimension 0.00	;	a l
X offset 0.00		
Y dimension 0.00		
Y offset 0.00		

The Black Panel Options window is available when using K panel ribbons; e.g., YMCKO. The figure below shows settings for the front side of the card.

To set how the printer prints the black areas of color images, several selections must be made:

- Select black panel extraction type:
 - **Disable black extraction** does not use the K panel for any part of the image. This selection will have the effect of rendering all black images as YMC composite.
 - **Print YMC composite and K black** uses both the K panel and the Y, M, and C panels to print the portions of the image that are identified as black. This selection will result in a dark, black image; but the edges will be smooth (due to YMC printed under the K), not the sharp edges typically desired for a barcode.
 - **Print all black data** uses only the K panel to print the portions of the image that are identified as being black. Note that the areas that are identified as black are based on the threshold selections made in the black level area in the black extraction from color images area; see Page 59.

- Apply black extraction on:
 - Option 1. **Black text** applies black extraction to areas of the image identified as text; e.g., company name, address.

Option 2. **Black graphics** applies black extraction to areas of the image identified as graphics primitives; e.g., lines, circles, rectangles, area fills, etc.

Option 3. **Black color bitmaps** applies black extraction to areas of the image identified as monochrome bitmap data contained in a color bitmap image.

Option 4. **Black monochrome bitmaps** applies black extraction to areas of the image identified as monochrome data in a bitmap; e.g., logos.

• Black extraction from color images:

- Print black with K panel:
 - **Defined areas** applies black extraction to areas of the image inside of the zones specified in the Area manager.
 - **Undefined areas** applies black extraction to areas of the image outside of the zones specified in the Area manager.
 - **Full card** applies black extraction to the entire image.
- **Black level**: Every dot of a printed image has an RGB color value that ranges from 0, 0, 0 (pure black) to 255, 255, 255 (pure white). The black level setting allows the user to specify the threshold value for any given dot to be treated as black. The maximum setting is R25, G25, B25.

4: Printer Settings and Adjustments

Printing Preferences

• Area manager: This option is enabled when either the Defined areas (extract inside the zone) or the Undefined areas (extract outside the zone) radio button is selected.

Select black panel extraction	type	Apply black extraction on

Y dimension 1.20		
Y offset 0.70		

- **Orientation**: The Orientation selection sets the image orientation to either Portrait or Landscape.
- Units: The Units selection sets the units to either inches or mm (millimeters). The X-dimension, X-offset, Y-dimension, and Y-offset reflect these units.

To create a zone: Select the rectangle icon , click on an area of the image to establish the first corner of the zone, drag the cursor until the zone is the desired size and shape, then release the mouse button. Note that multiple zones can be defined.

To select, move, or resize a zone: Select the arrow icon \square , click on a zone to select it, then drag it to move it, or drag on the edges to resize it.

To delete a zone: Select the rectangle icon with an "X" through it \square , then click on the zone that you want to delete.

Black Panel Print Overview

This section covers special handling of black data specified on the "Black Panel (K)" tab and applies only to surfaces of the card on which both YMC (color) and K (black) are to be printed.

Reasons and Behavior for Black Panel Extraction

To print black during the print process, equal amounts of process colors Y, M, and C (printer ribbon panels) are delivered, with maximum intensity, to create a near-black image.

- However, this "composite" image appears as a dark shade of gray and not machine readable. For example, a visually-black barcode printed with Y, M and C will not be detectable by most barcode readers and is not a true Visible Black color.
- The remedy for this is to "extract the black." In other words, print the same text, graphics, or barcode, using the K (black) panel, on top of the YMC barcode. (You can also choose to print only in K, omitting YMC from that region.)

Depending on the application used to design the card layout, different elements of the card image may be identified in different ways to the printer driver. The printer driver needs to recognize four types of basic elements:

- 1. Black text
- 2. Black (monochrome) graphics -- lines, circles, rectangles, and area fills
- 3. Black color bitmap images
- 4. Black monochrome bitmap images

These elements may not always be sent to the driver as expected. For example, a barcode may be sent as black text, a series of black area fills, or a black monochrome bitmap. Results will depend on the application used to create the card design. Another variable, again controlled by the card design application, is the precedence (stacking order) of the various element types in the event that one or more of them overlap.

If the printer is set up to print both YMC and K on the same side, text, lines and pixels, area fills and monochrome bitmaps, if (and only if) designated black by the application, can be directed to the K panel. For this to happen, the graphic type in question has to be selected on the "Black Panel (K)" tab. For text, lines and pixels, area fills and monochrome bitmaps the designation "black" is set at RGB values of 0,0,0. This threshold can be adjusted up to 25,25.25, with the Black level slider adjustment. Near-black doesn't qualify.

In the Black Panel (K) tab, the "element selection" portion is straightforward – simply designate any or all of the four graphic types to be printed in K, either K alone, or over process black (YMC).

Black extraction is quite different. It applies only to the fourth graphic type – the color bitmap image. To perform black extraction, the driver generates a K image by looking for black features (pixels) in the color bitmap, that is, instances where all three YMC values are at, or close to, the maximum (full intensity). Each such true-black or near-black instance generates a corresponding cluster of black pixels in the extracted image, which will be printed with the K (black) panel either on top of the YMC image, or replacing it entirely – your choice.

A problem that can arise when K is extracted from an entire card image is over-emphasis of every black cluster; e.g., dark hair in a portrait photo or scenic background. K overprinting in such areas can be displeasing. To deal with this, set up exclusion zones within which no extraction is performed. Six such areas are provided for on each side of the card. In the default state, all areas are null (0,0 offsets, and zero size).

There is a choice of black extraction within the defined areas or outside the defined areas.; see Print black with K panel: on page 59 for details.

Overlay Varnish Options

Select the overlay vari	nish (ype		
Selected area overlay	varnish		•
Overlay preview	Left	100	
	Right	820	
	— Тор	100	
🗖 Rotate 180°	Bottom	500	
Bitmap-based overlay	varnish		
Browse			

The Overlay Varnish Options window allows you to manage and configure the use of the Overlay when the selected ribbon shows the O panel (e.g. YMCKO).

Select the overlay varnish type - Option selection for applying overlay varnish ribbon to a card. Default setting is full edge-to-edge varnish.

There are various varnish options. A preview pane is shown for each selection.

- Full overlay varnish Applies an edge-to-edge overlay.
- No overlay Does not apply any overlay.
- Selected area overlay varnish Applies the overlay *inside* the area specified by the user. When this option is selected, position the Left, Right, Top, and Bottom overlay edges via the buttons (circled above).
- Selected area blank Applies the overlay *outside* the area specified by the user. When this option is selected, position the Left, Right, Top, and Bottom overlay edges via the buttons (circled above).
- Bitmap-based overlay varnish Applies a user-defined bitmap in the overlay panel. When selected, click the **Browse** button; in the browse window, find the desired monochrome bitmap (1 bpp); and click the **Open** button.
- Smartcard ISO Does not apply overlay in the area of the ISO standard Smart Card contacts.
- Smartcard AFNOR Does not apply overlay in the area of the AFNOR standard Smart Card contacts. AFNOR stands for Agence Française de Normalisation, a standardization organization based in France.
- Magnetic Stripe Does not apply overlay in the area of the ISO standard Magnetic Stripe.

Job Log

The Job Log is a utility that builds a database of card transactions in the printer's host computer. The Job Log records the data encoded on the card's magnetic stripe, together with date, time, and the printer's serial number.

The data set can be uploaded at any time to a central archive, thus providing a means for security officers to validate a card by comparing it with tamper-proof *real data*.

og file definitions.		
Create new log	file each day	
File name		
Separator	Delete log fi	les
og file contents		
Time	Date 📃	Printer serial number
IP address	User name	Spooler job number
Magnetic Track	1 Data 🔲 Magnetic Track2	Data 🔲 Magnetic Track3 Data
Static text		
e various log files v	ill be stored at C:\Program[Data\ZXPS1\ directory.

- Enable logging If this box is checked, the logging feature is enabled.
- Log File Definition Choose one of the following options:
 - If the "Create new log file each day" box is unchecked, the data is saved to a log file of your choice (Filename).
 - If the box is checked, the data is saved to log file with the day's date; e.g., ZXPLog_2014_10_16.
 - In addition to the Filename, you may wish to enter a special field Separator Character. The default field Separator Character is "]".

• Log File Contents - The Log File Contents group selects the data to be logged in the file you specified above. The data will be logged in the order displayed on the screen, each field being separated by the character specified in the Logfile Definition, Separator.

Log File Contents selections include:

- **Time**: Logs the time a which the card was sent to the printer in the HH:MM:SS format. The 24-hour clock is used, so 13:00:00 = 1:00 pm, and 05:00:00 = 5:00 am.
- Date: Logs the date the card was sent to the printer in the MM/DD/YYYY format.
- **Printer serial number**: Logs the serial number of the printer that printed the card.
- IP address: Logs the IP address of the PC that sent the card to the printer.
- User name: Logs the username of the person submitting the card print job.
- **Spooler job number**: Logs the number which the card print job was assigned in the Windows print spooler.
- **Magnetic Track 1, 2, 3 Data**: Logs the data sent to the printer to be encoded on the card's magnetic stripe.
- Static text: Adds the text in the text box (16 characters maximum) to the record.

Note • The location of the log files depends on the Operating System; e.g., for Windows 7, *C:\ProgramData\ZXPS1\ directory.*

The **Delete log files** button deletes the log files.

The Save Job Log Settings button saves the Job Log settings.

Image Control

Note • Printed colors can appear different than displayed colors; the following controls allow you to optimize the printed results.

Allows you to adjust the image colors; these adjustments apply to the entire card, not just photographic image.

ull color printing		
AA		
SU		
Origina	al P	review
Intensity		
Intensity Black	0	o
Intensity Black Yellow		0
Intensity Black Yellow Magenta		0 0 0
Intensity Black Yellow Magenta Cyan		0 0 0 0

- **Intensity** - increase or decrease the image intensity by moving the Black, Yellow, Magenta, and Cyan slider bars left or right. This will change the overall lightness or darkness of the image. Move the slider to the right (0 to 100) to increase the intensity and to the left (0 to -100) to decrease the intensity. Note that color ribbon wrinkling can be eliminated by reducing the *intensity*.

Use the **Restore Defaults** button to reset the settings to the driver defaults.

Encoding Tab

The Encoding tab dialog box is for setting Magnetic Encoder parameters. This feature is not enabled if the printer does not have the magnetic encoder option.

To access the Encoding tab, select *Start* > *Devices and Printers*. Right click on the *Zebra ZXP Card Printer* listing, then select *Printing preferences* > *Encoding*.

Advanced Settings provides advanced configuration capabilities and tools to manage magnetic encoder operation. This option is primarily used for Non-ISO encoding.

- **Track**: Select the track you want to configure.
- Track Settings:
 - Mode: Select ISO1, ISO2, ISO3, 3 bit, 4 bit, 5 bit, 6 bit, or 7 bit.
 - Density: Select 75 bpi or 210 bpi for the tracks.
- **Start/Stop Character** (For Non-ISO encoding only): Enter an ASCII value for the Start and Stop characters.
- **Encoding Start Position** (For Non-ISO encoding only): Enter the encoding start position in millimeters (mm).
- Character Parity (For Non-ISO encoding only): Choose the Character Parity you want to work with -- No parity, Even parity, or Odd parity.
- LRC Parity (For Non-ISO encoding only): Choose the LRC Parity you want to work with -- No parity, Even parity, or Odd parity.

Click the **Restore Defaults** button to reset the settings to the original values.

About Tab

This tab specifies the Printer Model, the Driver Version, and the Zebra Technologies Corporation Copyright.

To access the About tab, select *Start > Devices and Printers*. Right click on the *Zebra ZXP Card Printer* listing, then select *Printing preferences > About*.

5

Cleaning

Cleaning the System

Caution • PROTECT YOUR FACTORY WARRANTY!

The recommended maintenance procedures must be performed to maintain your factory warranty. Other than the recommended cleaning procedures described in this manual, allow only Zebra authorized technicians to service the ZXP Series 1 Card Printer.

NEVER loosen, tighten, adjust, or bend, etc., a part or cable inside the printer.

NEVER use a high-pressure air compressor to remove particles in the printer.

אפשר רק לטכנאים מורשים של Zebra לבצע פעולות שירות במדפסת הכרטיסים ZXP. Series 1 Card Printer.

אסור בהחלט לשחרר, להדק, לכוונן, לכופף וכדומה חלק או כבל הנמצאים בתוך המדפסת.

אסור בהחלט להסיר חלקיקים מפנים המדפסת באמצעות מדחס אוויר בלחץ גבוה.

To order ZXP Series 1 cleaning supplies, go to <u>www.zebra.com/supplies</u> for details.

When to Clean

Clean the Printer when:

- Print quality has been degraded.
- The LCD panel displays the message CLEAN PRINTER.
- You experience mag encoding failures.

How to Clean

- Note Cleaning can also be performed via the Tools dialog box; see Tools on page 51.
- **Step 1.** Place the printer power switch in the ON (|) position.
- **Step 2.** When the printer LCD shows **READY**, hold down the Multi-Function Control Button for five seconds.
- **Step 3.** When the cleaning cycle is initiated, the LCD message **REMOVE RIBBON THEN CLOSE LID** will display. Open the lid, remove the ribbon, and close the lid.

- **Step 4.** Once the ribbon is removed and the lid is closed, the firmware will eject any card inside the printer; then the message **EMPTY FEEDER THEN CLOSE COVER** will display. Open the cover, remove the cards, and close the cover.
- **Step 5.** Once the cards are removed and the cover is closed, the LCD will display **INSERT LONG CLEANING CARD**. Insert the long cleaning card.
- **Step 6.** When the presence of the cleaning card is sensed, the rollers will take the card into the printer; and the cleaning process will begin.
- Step 7. When the cleaning process is completed, the printer will eject the cleaning card.
- **Step 8.** The message **INSERT FEEDER CLEANING CARD** will display. Open the feeder cover, and insert the feeder cleaning card.
- **Step 9.** When the feeder cleaning card has been sensed by the feeder card sensor, the message **CLOSE COVER** will display. Close the feeder cover.
- **Step 10.** When feeder cleaning is complete, the message **REMOVE FEEDER CLEANING CARD** will display. Open the feeder cover, remove the cleaning card, and close the feeder cover.
- **Step 11.** After the cleaning card is removed and the feeder cover is closed, the LCD will display **CLEANING DONE**.
- Step 12. You may now reload the ribbon and cards and continue printing.

Cleaning the Printhead

Use of the cleaning cards will normally do an adequate job of cleaning the printer. However, a separate Printhead cleaning, using swabs, can remove more stubborn deposits when print anomalies persist. To avoid deposits, only use foam-tipped swabs.

Caution • Never use a sharp object to scrape deposits from the printhead. Permanent damage to the printhead will result.

זהירות • אסור לגרד משקעים מראש ההדפסה באמצעות חפץ חד. התוצאה עלולה להיות נזק קבוע לראש ההדפסה.

- Step 1. Place the printer power switch in the OFF (O) position.
- Step 2. Open the printer lid to fully to reveal the printhead mounted on the inside the cover.

- **Step 3.** Clean the printhead by moving an alcohol-moistened swab tip side-to-side across the printhead elements. Only use moderate force.
- **Step 4.** Allow two to three minutes for the printhead to dry before closing the lid and placing the printer power switch in the ON (|) position.

6

Troubleshooting

Introduction

The objective of troubleshooting is to relate a problem to an associated assembly or system function, in order to most efficiently isolate and repair the problem. Typically, this involves determining the failure symptom and then checking one or more possible causes of the failure.

In general, for a given failure symptom one or more possible causes are listed, with suggested corrective action to take. These causes should be checked and corrective actions taken in the order given; they are listed in order of likelihood and complexity.

Troubleshooting Procedures

LCD Panel Warnings and Error Messages

The following tables show causes and solutions to symptoms related to improper operation. Check the table when experiencing any loss of operation or print quality.

PANEL V	PANEL WARNINGS (printer will still operate)			
Problem / Symptom	Description or Cause	Possible Solution ^{Note}		
CHECKING RIBBON	Printer is determining type of ribbon installed.	No action required status message only.		
CLEAN PRINTER	Printer cleaning required.	Refer to <i>Cleaning the System</i> on page 71.		
CLOSE LID	The lid is open.	Make sure that the lid is completely and securely closed.		
ENCODING ERROR	May be incorrect card type.	Check that you are using the correct magnetic card type (for low or high coercivity encoding).		
INVALID MAGNETIC DATA	The magnetic data may be invalid.	Check data format.		

Note: If the problem persists, contact Technical Support; see *Worldwide Support* on page 119.

ERROR	MESSAGES (printer will no	ot operate)
Problem / Symptom	Description or Cause	Possible Solution ^{Note}
CHECK RIBBON	Wrong type of ribbon may be installed. Ribbon for P1XX or ZXP3 will not work.	Install proper ribbon.
	Ribbon may be improperly installed.	Reload ribbon cartridge. Refer to <i>Loading Ribbon Cartridge</i> on page 32.
COMMAND ERROR	A command error occurred.	Reset the Printer, and try printing the card again.
COVER OPEN	The cover is open.	Make sure that the cover is completely and securely closed.
LID OPEN	The lid is open.	Make sure that the lid is completely and securely closed.
MECHANICAL ERROR	Check that you are using the correct card type.	See <i>Technical Specifications</i> on page 85.
	Check that the ribbon is loaded correctly.	Refer to <i>Loading Ribbon Cartridge</i> on page 32 for details.
	Check for a card jam in the card feed module.	Power off the printer, open the lid, release the card feeder by pressing the finger tab lever to the left of the card thickness adjustment (arrow below), lift up the card feeder, and remove any jammed cards from the card transport module. Note that you may need to rotate the card transport module by hand to access the jammed cards.

Note: If the problem persists, contact Technical Support; see *Worldwide Support* on page 119.

ERROR	MESSAGES (printer will no	ot operate)
Problem / Symptom	Description or Cause	Possible Solution ^{Note}
MECHANICAL ERROR (continued)	The card feeder feeds two cards completely onto the card feed module.	Calibrate the Card Load Sensor via the !SAP 1 command. For command implementation, refer to <i>Tools</i> on page 51.
	The card feeder partially feeds the second card, thereby blocking card feed module operation.	The card thickness adjustment (arrow below) should be closed one or two clicks, one click at a time.
	The card feeder does not feed a card. This may be because two cards are stuck together or a leading edge is damaged.	Remove the card, fan the card stack, and return the cards to the card feeder.
	The card feeder does not feed a card; and it is not due to stuck-together cards, damaged cards, or cards that were not fanned.	The card thickness adjustment (circled below) should be opened one or two clicks, one click at a time.
OUT OF CARDS	Check for cards in the card feeder.	If no cards present, load cards; then press the Panel Button for 1 second. The printing job will restart.
	Card did not feed.	1. Verify that the card thickness adjustment is set to the thickness of the cards being used.
		2. Fan the card stack to ensure that cards are not stuck together.
		3. Remove the first card in the stack, and check if the edge is damaged; discard if it is.
		4. Open the card thickness adjustment one or two detent clicks.
OUT OF RIBBON	Check ribbon. May be defective or entirely used.	Load a new ribbon cartridge. Refer to <i>Loading Ribbon Cartridge</i> on page 32 for details.

Note: If the problem persists, contact Technical Support; see Worldwide Support on page 119.

Print Quality Issues

This section will help you resolve print quality problems.

The print quality is dependent on several factors. The two most important factors that will increase your print quality are cleanliness and card stock.

To diagnose and fix print quality problems, follow the troubleshooting procedures below:

Small spots 8	0
Non-printing horizontal lines (white) 8	1
Pale or inconsistent results 8	2
Blurry printed image 8	3
No printing 8	4

Example • Small spots

Small spots appear on the printed card with a non-printed area or a different color.

Possible Cause:

• Contamination on the card surface.

Solutions:

- Check that cards are stored in a dust free environment.
- Use a different supply of cards.

Possible Cause:

• Dust inside the printer and/or dirty Cleaning Roller.

Solutions:

- Clean the printer. Refer to *Cleaning the System* on page 71.
- Check that the protective cover was removed from the ribbon cartridge cleaning roller. Refer to *Loading Ribbon Cartridge* on page 32.

Example • Non-printing horizontal lines (white)

There are non-printing horizontal lines (white) on the card surfaces.

Possible Cause:

• Ribbon cartridge is not correctly positioned.

Solutions:

- Ensure that the ribbon is properly rolled onto the ribbon cores of the cartridge and that there are no wrinkles in the ribbon.
- Replace ribbon cartridge. Refer to *Loading Ribbon Cartridge* on page 32.

Possible Cause:

• Printhead is dirty.

Solutions:

• Clean the Printhead. Refer to *Cleaning the Printhead* on page 74.

Possible Cause:

• Printhead elements are damaged (e.g., scratched or burnt).

Solutions:

• Call Zebra Customer Service for Printhead replacement information; see *Worldwide Support* on page 119.

Possible Cause:

• Loose printhead data cable connection.

Solutions:

• Ensure that the cable connection at the Printhead is secure.

Example • Pale or inconsistent results

Printing shows very pale or inconsistent results.

Possible Cause:

• Ribbon cartridge have been stored improperly or is damaged.

Solution:

• Change ribbon cartridge, and print again. Refer to *Loading Ribbon Cartridge* on page 32.

Possible Cause:

• Cards may not meet specifications. Refer to *Technical Specifications* on page 85.

Solution:

• Use a different supply of cards.

Possible Cause:

• Dust or embedded contamination on elements of the Printhead.

Solution:

• Clean the Printhead. Refer to *Cleaning the Printhead* on page 74.

Possible Cause:

• Printing on wrong side of writable back cards.

Solution:

• Reverse direction of cards in feeder.

Possible Cause:

• Improperly adjusted print intensity/density.

Solution:

• Adjust the print intensity/density. Refer to *Image Control* on page 66.

Example • Blurry printed image

Printing shows blurry printed image.

Possible Cause:

• Ribbon cartridge may not be correctly positioned.

Solution:

- Check that the ribbon is properly rolled onto the ribbon cores of the cartridge, with no wrinkles.
- Replace ribbon cartridge, making sure it locks in place, and print again. Refer to *Loading Ribbon Cartridge* on page 32.

Possible Cause:

• Ribbon may not be synchronized on the correct color panel position.

Solution:

• Open lid, then close lid to synchronize ribbon.

Possible Cause:

• Cards may not meet specifications. Refer to *Technical Specifications* on page 85.

Solution:

• Use a different supply of cards.

Possible Cause:

• Dust or embedded contamination inside the printer.

Solution:

• Clean the Rollers and the Printhead. Refer to *Cleaning the System* on page 71 and *Cleaning the Printhead* on page 74 respectively.

Example • No printing

No printing on the card.

Possible Cause:

• Ribbon cartridge may not be installed in the printer.

Solution:

• Check for ribbon cartridge in the printer. Refer to *Loading Ribbon Cartridge* on page 32.

Possible Cause:

• Cards may not meet specifications. Refer to *Technical Specifications* on page 85.

Solution:

• Use a different supply of cards.

Possible Cause:

- Cable on Printhead may be disconnected.
- Printhead elements may be scratched or burnt.

Solution:

• Call Service for Printhead repair or replacement information; see *Worldwide Support* on page 119.

7

Technical Specifications

Specifications

Specifications are provided for reference and are based on printer tests using Zebra brand consumables. Results may vary in actual application settings or when using other than recommended Zebra supplies. Zebra recommends always qualifying any application with thorough testing.

Standard Features

- Eco-Friendly Load-N-Go[™] drop-in ribbon ZXP Series 1 cartridges
- ZRaster[™] host-based image processing
- Auto calibration of ribbon
- USB connectivity
- Microsoft Certified Windows drivers
- Energy Star Certified
- Print Touch NFC tag for online Printer documentation access
- 100 card covered feeder (30 mil)
- 50-card capacity integrated flip-out card output hopper (30 mil)
- 16-character LCD operator control display
- 300 dpi (11.8 dots/mm) print resolution
- Two-year warranty on printer
- Two-year (unlimited passes) original printhead
- One-year hot swap (U.S. only)

Printing Specifications

- Dye-sublimation thermal transfer direct to card
- Full color or monochrome printing
- Single-sided printing
- 500 cph monochrome single-sided
- 120 cph single-sided YMCKO
- Edge-to-edge printing on standard CR-80 media

Printing Throughput

Printing throughput (cards per hour) based on click to drop printing, average print coverage, with USB connectivity. Times may vary depending on the computer and other configurations.

- 500 cph monochrome single-sided
- 120 cph single-sided YMCKO

Encoding Options and Specifications

• Magnetic stripe encoder – ISO 7811 (new and re-encoded; tracks 1, 2, and 3; high and low coercivity; stripe down; 30 mil card only; factory install only)

Optional Features

- CardSenseTM Single-Card Feed Kit, field upgradable
- ZebraCareTM extended product warranty programs

Communications Interfaces

- USB V2.0 (cable included) standard
- Built-in 10/100 Ethernet optional, field upgradable

Card Compatibility

NOTE: For optimum print quality and printer performance, use of Zebra genuine supplies is recommended.

- Card Thickness: 10-40 mil
- Card Size: CR-80, ISO 7810 format, Type ID-1, 2.12" (54 mm) x 3.38" (86 mm)
- Card Material: PVC and PVC composite
- Spot Color or monochrome print only on < 20 mil card thickness

Physical Specifications (standard model)

Printer		
Height	9.3"	(236 mm)
Width	7.9"	(200 mm)
Depth	13.0"	(330 mm)
Weight	11.6 lbs	(5.3 kg)

Electrical Specifications

- Auto-switching single-phase AC power
- Operating range: 90-132VAC and 190-264VAC RMS.
- Frequency range : 47-63 Hz.
- Power requirement is 100W max continuous and 607W peak (for 450 µsec) output power
- FCC Class A

Supplies Specifications

NOTE: The ZXP Series 1 printer is designed to work only with Zebra True Colours ix Series, ZXP Series 1 ribbons.

- Zebra ix Series intelligent technology automatically detects and authenticates ribbon.
- Integrated cleaning roller included on each ribbon.
- Media Starter Kit 1 YMCKO ribbon, 100 30-mil PVC cards
- Cleaning Kit: 4 print engine cleaning cards and 4 feeder cleaning cards, 1000 images/card

True Colours ix Series ZXP Series 1 Ribbon Options

Ribbon Description	Eco Cartridge Image Count
YMCKO	100
1/2 YMCKO	400
Black Monochrome	1000
White Monochrome	500

Preventative Maintenance

Zebra recommends cleaning the printer on a regular basis using standard Zebra cleaning supplies and parts. Go to <u>www.zebra.com/supplies</u> for details.

Environmental Specifications

- Operating Temperature: 60° F to 86° F (15° C to/30° C)
- Storage Temperature: 23° F to 131° F (-5° C to 55° C)
- Operating Humidity: 20% to 65% non-condensing
- Storage Humidity: 20% to 70% non-condensing
- Media Storage:
 - Temperature: 41° F to 77° F (5° C to 30° C)
 - Humidity: 35% to 65% non-condensing
 - Store in dark location

Agency Approvals

Zebra ZXP Series 1 Card Printer complies with following applicable directives and standards for the ITE: Residential, Commercial & Light Industry environments

- For US/Canada/Mexico/Australia&NZ
 - FCC Class A, cfr47, Part 15 Subpart J
 - FCC 15.257 2008, Part 15 Subpart C
 - Canadian STD RSS-210
 - NOM-ETL (Mexico)
 - IEC 60950-1:2005+A1:2009 Safety Standard (TUV & NRTL)
 - C-Tick (Australia) Electromagnetic Radiation Standard
- For Europe:
 - Applicable Directives and Supporting Standards:

Compliance Information

FCC Compliance Statement

This device complies with Part 15 rules. Operation is subject to the following two conditions:

- 1. This device may not cause harmful interference, and
- 2. This device must accept any interference received, including interference that may cause undesired operation.

This equipment has been tested and found to comply with the limits for Class A Digital Devices, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the product manuals, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference, in which case the user will be required to correct the interference at his own expense.

The user is cautioned that any changes or modifications not expressly approved by Zebra Technologies could void the user's authority to operate the equipment. To ensure compliance, this printer must be used with Shielded Communication Cables.

FCC Radiation Exposure Statement (RLAN)

This equipment complies with FCC radiation exposure limits set forth for an uncontrolled environment.

Important

- 1. The radio must be installed with a minimum 20cm separation between the user and the antenna.
- 2. The radio must not be co-located or used in simultaneous transmitting condition with another radio.
- 3. The host system shall have a label to indicate that the system contains a certified module. An example is "Contains FCC ID : XXXXX , IC ID: YYYYY".

Canadian DOC Compliance Statement

Cet appareil numérique de la classe A est conforme à la norme NMB-003 du Canada.

This Class A digital apparatus complies with Canadian ICES-003.

European Union and EFTA

Advanced Sharing Settings

This section covers the following Advanced Sharing Settings:

Installing and setting up a Windows 2008 Server96
Advanced Sharing Settings for Server R2 200897
Home or Work Network Settings:97
Public Network Settings:98
Advanced Sharing Settings for Server 2008
Advanced Sharing Settings for Windows 7100
Home or Work Network settings:100
Public Network Settings: 101

Installing and setting up a Windows 2008 Server

- 1. Install a new server OS, Windows 2008 Server 64 bit.
- 2. Log in as Admin user with password.
- 3. Check the following services by running the command "Services.msc" from the Start->Run menu, and make sure the following services are started/running:
 - a. SSDP Discovery –
 - b. Function discovery resource publication.
 - c. UPnP device host-
 - d. DNS Client.
- 4. The services mentioned above should be running to ensure that the following network settings are saved and take effect.

Advanced Sharing Settings for Server R2 2008

Home or Work Network Settings:

Change sharing options for different network profiles

Windows creates a separate network profile for each network you use. You can choose specific options for each profile.

Home or Work

Network discovery

When network discovery is on, this computer can see other network computers and devices and is visible to other network computers. <u>What is network discovery?</u>

- Turn on network discovery
- C Turn off network discovery

File and printer sharing

When file and printer sharing is on, files and printers that you have shared from this computer can be accessed by people on the network.

- Turn on file and printer sharing
- C Turn off file and printer sharing

Public folder sharing

When Public folder sharing is on, people on the network, including homegroup members, can access files in the Public folders. <u>What are the Public folders?</u>

- Turn on sharing so anyone with network access can read and write files in the Public folders
- C Turn off Public folder sharing (people logged on to this computer can still access these folders)

Password protected sharing -

When password protected sharing is on, only people who have a user account and password on this computer can access shared files, printers attached to this computer, and the Public folders. To give other people access, you must turn off password protected sharing.

- Turn on password protected sharing
- C Turn off password protected sharing

Public Network Settings:

Public (current profile)	3.3

Network discovery

When network discovery is on, this computer can see other network computers and devices and is visible to other network computers. <u>What is network discovery?</u>

- Turn on network discovery
- C Turn off network discovery

File and printer sharing

When file and printer sharing is on, files and printers that you have shared from this computer can be accessed by people on the network.

- Turn on file and printer sharing
- C Turn off file and printer sharing

Public folder sharing

When Public folder sharing is on, people on the network, including homegroup members, can access files in the Public folders. <u>What are the Public folders?</u>

- Turn on sharing so anyone with network access can read and write files in the Public folders.
- O Turn off Public folder sharing (people logged on to this computer can still access these folders)

Password protected sharing

When password protected sharing is on, only people who have a user account and password on this computer can access shared files, printers attached to this computer, and the Public folders. To give other people access, you must turn off password protected sharing.

- Turn on password protected sharing
- C Turn off password protected sharing

Advanced Sharing Settings for Server 2008

Network (Public network)		Customize
Access	Local only	
Connection	Local Area Connection	View status
3 Sharing and Discovery		
Network discovery	Custom	•
File sharing	o On	-
Public folder sharing	On (password required)	-
Printer sharing	On (password required)	-
Password protected sharing	On On	*

Show me all the files and folders I am sharing Show me all the shared network folders on this computer

Advanced Sharing Settings for Windows 7

Home or work Network settings

Network discovery

When network discovery is on, this computer can see other network computers and devices and is visible to other network computers. What is network discovery?

Turn on network discovery

Turn off network discovery

File and printer sharing

When file and printer sharing is on, files and printers that you have shared from this computer can be accessed by people on the network.

Turn on file and printer sharing

Turn off file and printer sharing

Public folder sharing

When Public folder sharing is on, people on the network, including homegroup members, can access files in the Public folders. <u>What are the Public folders?</u>

Turn on sharing so anyone with network access can read and write files in the Public folders
 Turn off Public folder sharing (people logged on to this computer can still access these folders)

Media streaming

When media streaming is on, people and devices on the network can access pictures, music, and videos on this computer. This computer can also find media on the network.

Media streaming is on. Choose media streaming options...

File sharing connections

Windows 7 uses 128-bit encryption to help protect file sharing connections. Some devices don't support 128-bit encryption and must use 40- or 56-bit encryption.

Output Use 128-bit encryption to help protect file sharing connections (recommended)

Enable file sharing for devices that use 40- or 56-bit encryption

Password protected sharing

When password protected sharing is on, only people who have a user account and password on this computer can access shared files, printers attached to this computer, and the Public folders. To give other people access, you must turn off password protected sharing.

- Turn on password protected sharing
- Turn off password protected sharing

HomeGroup connections

Typically, Windows manages the connections to other homegroup computers. But if you have the same user accounts and passwords on all of your computers, you can have HomeGroup use your account instead. <u>Help me decide</u>

O Allow Windows to manage homegroup connections (recommended)

O Use user accounts and passwords to connect to other computers

Public Network Settings:

Network discovery

When network discovery is on, this computer can see other network computers and devices and is visible to other network computers. What is network discovery?

- Turn on network discovery
- Turn off network discovery

File and printer sharing

When file and printer sharing is on, files and printers that you have shared from this computer can be accessed by people on the network.

- Turn on file and printer sharing
- Turn off file and printer sharing

Public folder sharing

When Public folder sharing is on, people on the network, including homegroup members, can access files in the Public folders. <u>What are the Public folders?</u>

Turn on sharing so anyone with network access can read and write files in the Public folders

Turn off Public folder sharing (people logged on to this computer can still access these folders)

Media streaming

When media streaming is on, people and devices on the network can access pictures, music, and videos on this computer. This computer can also find media on the network.

Choose media streaming options...

File sharing connections

Windows 7 uses 128-bit encryption to help protect file sharing connections. Some devices don't support 128-bit encryption and must use 40- or 56-bit encryption.

Ose 128-bit encryption to help protect file sharing connections (recommended)

Enable file sharing for devices that use 40- or 56-bit encryption

Password protected sharing

When password protected sharing is on, only people who have a user account and password on this computer can access shared files, printers attached to this computer, and the Public folders. To give other people access, you must turn off password protected sharing.

- Turn on password protected sharing
- Turn off password protected sharing

Appendix B

Magnetic Encoder Option

Introduction

This section contains information on the additional operations of the ZXP Series 1 Card Printer with an optional Magnetic Encoder.

This section covers:

Encoder Settings (Driver)	104
Media Loading Orientation	104
Magnetic Encoder Cleaning	104
Magnetic Encoding Type	105

Encoder Settings (Driver)

The Encoder Settings dialog box is used for setting various Magnetic Encoder parameters. This feature is not enabled if the printer does not have the magnetic encoder option.; see Encoding Tab on page 67 for details.

Media Loading Orientation

Caution • ONLY USE cards that comply with ISO 7810 & 7811 standards for magnetic stripe cards. The magnetic stripe must be flush to the surface of the card to work properly. Never use cards which have taped-on magnetic stripes.

זהירות השתמש רק בכרטיסים התואמים לתקנים ISO 7810 ו-ISO 7811 של כרטיסי פס מגנטי. משטח פני הפס המגנטי חייב להתלכד עם משטח הכרטיס כדי שיפעל בצורה נכונה. אסור בהחלט להשתמש בכרטיסים בעלי פסים מגנטיים מודבקים.

Note • Zebra-approved HiCo & LoCo PVC cards are available; see <u>http://www.zebra.com/</u> <u>supplies</u> for details.

When loading cards with magnetic stripes into the card feeder, please ensure that the magnetic stripe is facing the left side of the printer, and closest to the bottom edge of the card feeder; see Loading Cards on page 35 for details.

Magnetic Encoder Cleaning

Use the standard cleaning card process as described in Section 5, Cleaning. This cleans the most important parts of the printer; including the Printhead, Transport Roller, and Magnetic Stripe Encoder.
Magnetic Encoding Type

ISO (Default)

The encoder reads and writes standard ISO track data formats in standard ISO track locations. The following shows the three standard ISO tracks.

Each track can be encoded and decoded with ASCII characters in the standard default ISO data formats:

Track	Density (BPI)	Bits per character	Character parity	Length (characters)	LRC parity	Start sentinel	End sentinel	Start sentinel offset
1	210	7	Odd	76	Even	%	?	0.293" (7.4 mm)
2	75	5	Odd	37	Even	;	?	0.293" (7.4 mm)
3	210	5	Odd	104	Even	;	?	0.293" (7.4 mm)

The magnetic encoder can read or encode up to 3 tracks of digital information onto CR-80 cards incorporating a HiCo or LoCo magnetic stripe in the ISO 7811 format.

Encoding for the three tracks uses the ISO 7811 format.

- Track 1 uses 210 BPI (bits per inch) encoding in the International Air Transport Association (IATA) format of 79 alphanumeric characters, at 7 bits per character.
- Track 2 uses 75 BPI encoding to store 40 numeric characters at 5 bits per character in American Banking Association (ABA) format.
- Track 3 uses 210 BPI encoding of 107 numeric characters at 5 bits per character in THRIFT format.

The ISO data formats include a preamble (all zeros), a start character, data (7-bit or 5-bit as specified by ISO), a stop character, and a longitudinal redundancy check (LRC) character. The 7-bit data format has 6 bits of encoded data and a parity bit. The 5-bit data format has 4 bits of encoded data and a parity bit.

The ISO data formats include a data field separator (or delimiter) that allows parsing of the encoded track data. An example of separate data fields would be the ABA data format (Track 2) that includes a Primary Account Number (PAN) field and an account information field (for expiration date, country code, etc.).

Appendix C

CardSense Single-Card Feed Mode

Introduction

For operating the ZXP Series 1 Card Printer in single-card feed mode, the printer requires that the operator install an optional CardSense Single-Card Feed Kit.

In the single-card feed mode, the printer will accept cards through the front slot.

Installing the CardSense Single-Card Feed Kit

- Step 1. Turn printer power OFF.
- **Step 2.** Open the lid, and remove the ribbon cartridge.

Important • Make sure the Card Output Hopper remains closed.

Step 3. Install the black roller. Place it between the blue clips just behind the card entry slot, and press the roller straight down so it is fully seated.

- **Step 4.** While holding the roller down, turn power ON. You will hear a loud click as the clips secure the roller.
- Step 5. At this point, let go of the roller, and then turn printer power OFF.
- **Step 6.** Open the Cleaning Cartridge. The new Cleaning Cartridge will contain a Cleaning Roller with its protective wrapping.

- **Step 7.** Remove the Cleaning Roller from the Cleaning Cartridge, and then remove the protective wrapper from the Cleaning Roller,
- Step 8. Place the Cleaning Roller in the Cartridge, and close the lid.

Step 9. The Cleaning Cartridge is held in place by two clips. While gently squeezing the clips inward, press the cartridge into place. It will seat with a click.

- **Step 10.** Insert the Ribbon Cartridge with the cleaning roller facing down, so the gears on the ends of the rollers fit into the appropriate slots.
- **Step 11.** Close the printer lid, and push down until you hear an audible click. If you can not close the lid, the cleaning cartridge or the ribbon cartridge may be installed wrong.
- Step 12. Place the printer power switch in the ON (|) position.

Setting Up the Printer Driver

Card Setup tab allows the user to set the single-card feed mode.

To access the Card Setup tab, select *Start* > *Devices and Printers*. Right click on the *Zebra ZXP Card Printer* listing, then select *Printing preferences* > *Card Setup*.

rd Setup Encoding	About		
Printing options			
Orientation Lan	dscape 💌	Print on both sides	No *
Rotate 180° [No	ne] 🔹	Monochrome conversion	Auto 🔻

			[
st&)		Image Control	Restore Defaults
	Job Log		

- **Step 1.** Make the appropriate Single Feed option selection from the Current Status dropdown menu:
 - **Card feeder**: The printer will attempt to a pull a card from the Card Feeder. If the Card Feeder is empty, the printer will generate an *OUT OF CARDS* error message.
 - **Single feeder slot**: For each print job, the printer will generate an *INSERT CARD* message. Any cards in the Card Feeder will not be used.
 - Auto feed: The printer will attempt to feed cards from Card Feeder first. If Card Feeder is empty, the printer will generate an *INSERT CARD* message. No *OUT OF CARDS* error message will be generated.

Step 2. Click the Apply button, then click the OK button.

Important • You do not have to remove the components of the Single-Card Feed Kit in order to operate in normal mode (printing cards from the Card Feeder).

Printing a Single Card

Step 1. Cards are inserted one at a time into the slot on the front of the printer. Do not feed more than one card at a time. Note that the card must be fully inserted before printer turns on and accepts the card.

- **Step 2.** The card is printed.
- **Step 3.** The printed card is ejected out through the same (input) slot.

Note • If single-card feeding will be the normal mode of operation, you may select that mode through the driver software. In single-card feed mode, the card will not be printed until the print job has been sent to the printer and the card to be printed has been inserted into the single-card feed slot

Appendix D

Half-Panel Ribbon Operation

Introduction

Half-Panel YMCKO Color Ribbons are used if you do not need full color printing over the entire surface of a card. These ribbons have half panels of YMC for ID pictures, logos, etc., for printing a 38mm wide window on the front of the card. The remaining panels are full-size black resin and clear overlay so black text and protection can be applied over the entire surface of the card. The position of the half panel is adjustable.

The command is **HALF p1** where p1 sets the start position of the print window. The position of the window is with respect to the leading edge of the card; i.e., the edge of card which exits the printer first. To reset the driver, the command is simply HALF without the p1 parameter.

Parameters **p1** ranges from -38 to 1024. Values below 0 will move the window off the leading edge of the card, and values over 568 will move the window off the trailing edge of the card. Note that 12 points = 1mm.

Setup and Operation

- Step 1. Install a Half-Panel YMCKO Ribbon Cartridge; see Loading Ribbon Cartridge on page 32.
- Step 2. Configure Driver Printing Preferences:
 - a. Select *Start > Devices and Printers*. Right click on the *Zebra ZXP Card Printer* listing. Select *Printing preferences > Card Setup*.

Asia Pacific - Repair Services

Before returning any equipment to Zebra Technologies Corporation for in-warranty or out-of warranty repair, contact Repair Services for a Return Materials Authorization (RMA) number. Repack the equipment in the original packing material, and mark the RMA number clearly on the outside. Ship the equipment, freight prepaid, to either address listed below:

Zebra Technologies Asia Pacific Pte. Ltd. No.5 Changi North Way Level 3 Singapore 498771 Agility Building

T:	+65 6546 2670 ext 3203 and 3204
F:	+65 6546 5328
E:	APACRepair@zebra.com
